SONIX, INC. PARTNERS WITH SILICON TURNKEY SOLUTIONS INC. TO LAUNCH A NEW SILICON VALLEY APPLICATION & SALES SUPPORT CENTRE

MILPITAS, CA August 1, 2008 – Sonix, Inc., announced today that it is expanding its Application and Sales Support on the West Coast by establishing a strategic partnership with Silicon Turnkey Solutions Inc. (STS), a leader in innovation and ultra-high performance technologies in the realm of IC testing and qualification. Sonix Inc. will be promoting acoustic applications expertise jointly with STS to support customers.

STS has enhanced its Device Analysis capabilities by adding a full range of Sonix acoustic microscopy equipment including the best of class **VISION** and robust **FUSION** solutions. Sonix and STS have application engineer's onsite to perform acoustic analysis including advanced packages, complex IC's, multi-chip modules, system-on-a-wafer, laminated PCB's and more. Application engineers are fully trained on latest technologies and best acoustic practices.

Shwetha Jakkidi will head our applications and customer education processes at the Silicon Valley facility. Shwetha has been a valued acoustic microscopy engineer with Sonix for over five years providing expertise in solving complex problems and developing new technologies.

Pat Tang, a recent addition to Sonix, has been a senior executive in the semiconductor and high tech industry with a genuine passion for helping customers understand how our solutions can improve performance, throughput and yield within their operations. Pat provides twenty-five years experience in technology, engineering, business development, and sales and marketing management on a global scale in the semiconductor, telecom, wireless and related industries.

Sonix, Inc, a wholly owned subsidiary of the Danaher Corporation (NYSE:DHR), is a leading manufacturer of scanning acoustic microscopes and non-destructive testing equipment.

Since opening our doors in 1986, Sonix has been a consistent innovator in non-destructive testing. Sonix was the first company to bring PC-based, digital imaging solutions to our customers. Since then, Sonix has continued to push the technology envelope and provide our customers with superior inspection technologies and engineering advancements.

Our systems are used for the non-destructive inspection of a variety of materials including semiconductor packages, automotive parts and other advanced components. Based on proprietary software, hardware and patented innovations, our systems have evolved over many years of experience working with you, the customer. We strive to build relationships with our customers and these relationships have helped us build superior products. Our customers come from a variety of industries including semiconductor packaging, component manufacturing, automotive, aerospace, and traditional non-destructive testing industries.

ABOUT SILICON TURNKEY SOLUTIONS

Incorporated in 2001, Silicon Turnkey Solutions Inc. has established itself as a leading-edge provider of Specialty Assembly, Reliability, Qualification and Electrical Test services, serving a broad spectrum of customer bases. As a trusted strategic partner and with a proven track record, STS continues to be on the technological forefront by utilizing the most sophisticated test and reliability equipment and high level in-house project management and engineering expertise. STS is recognized as a leader in providing innovative and cost competitive turnkey solutions for complex 3D and highly integrated microelectronic devices such as SIPs, MEMs, SOC, Flip Chip and ASICs.
